

# Data Science amb Python

## Sprint 16

S16 T02: Tasca de web scraping

Cristiane de Souza da Silva

July 2021

**Description** Learn how to do web scraping.

## Nivel 1

### - Exercise 1

Perform web scraping of a page on the [Madrid Stock Exchange](#) using BeautifulSoup and Selenium.

```
In [1]: # Load the librarie

import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
from bs4 import BeautifulSoup
from selenium import webdriver
from urllib.request import urlopen
import time
```

### Planning and Defining Objects

For this exercise, I will collect the session prices (**Precios de la sesión**), where the volume and cash for each value includes all the operations carried out until the closing of the trading session.

Follow below the table I want to scrape.

### Using Webscraping with BeautifulSoup

```
In [2]: # Download the contents of the web
html = urlopen('https://www.bolsamadrid.es/esp/aspx/Mercados/Precios.aspx?')

#Parse the html data using beautiful_soup
bs = BeautifulSoup(html, "html.parser" )
```

```
In [3]: #see the title attribute
title_tag_object = bs.title

print('title tag object:', title_tag_object)
```

```
title tag object: <title>
                Bolsa de Madrid - Precios Sesión
</title>
```

```
In [4]: #find a html table in the web page
table = bs.find_all('table',{'class':'TblPort'})[1]
rows = table.find_all('tr')
table
```

```
Out[4]: <table cellpadding="3" cellspacing="0" class="TblPort" id="ctl00_Contenido_
tblAcciones" width="100%">

## Using Webscraping with Selenium

Run the below python code to open the Safari web browser automatically.

```
In [8]: from selenium import webdriver
import time
browser = webdriver.Safari(executable_path = '/usr/bin/safaridriver')
browser.get('https://www.bolsamadrid.es/esp/aspx/Mercados/Precios.aspx?ind:
#time.sleep(10)
#browser.quit()
```

In this case, I will use the xpath to get the syntax oh the html page. For example, I want to know the syntax of the 'ACCIONA'. When I copy its xpath , this is shown:

**//\*[@id="ctl00\_Contenido\_tblAcciones"]/tbody/tr[2]/td[1]/a**

So, I will use the function 'find\_elements\_by\_xpath' from Selenium to confirm the value of the cell. I also put '[0]' because it is the first row element.

```
In [9]: browser.find_elements_by_xpath('//*[id="ctl00_Contenido_tblAcciones"]/tbody
```

```
Out[9]: 'ACCIONA'
```

```

In [10]: # Create a dataframe for Selenium

Nombre = []
Ult= []
Dif= []
Max= []
Min= []
Volumen= []
Efectivo = []
Fecha= []
Hora= []

# Looping through the 36 rows of the webpage table,
for i in range(2, 37):

    Nombre.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_
    Ult.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_tb
    Dif.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_tb
    Max.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_tb
    Min.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_tb
    Volumen.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido
    Efectivo.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenid
    Fecha.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_
    Hora.append(browser.find_elements_by_xpath('//*[@id="ctl00_Contenido_tl

# After the loop is finished, I create the DataFrame.
df_selenium = pd.DataFrame({'Nombre': Nombre,

You can see the dataframe above with values of the same table. The difference is the column 'Hora' from the first table obtained with BeautifulSoup.

That's because it's a 'dynamic' table where every time their values will be updated according to the time we refreshed it.

```
In [12]: #export to csv  
df.to_csv('precios_sesion.csv', index=False)
```

## Nivel 2

### - Exercises 2

**Document in a word your data set generated with the information that the different Kaggle files have.**

## Description

### Context

This is a set of data created from Madrid Stock Exchange - Session Prices.

I recommend using this dataset for educational purposes, for practice and to acquire the necessary knowledge. The session prices are in the open market or continuous contracting that takes place between 9:00 and 17:30. In this period, the buying and selling operations intersect. During the open market, orders can be traded in full, partially, or not executed.

### Content

What's inside is the session prices (Precios de la sesión), where the volume and cash for each value includes all the operations carried out until the closing of the trading session. You can see stock prices and its column names.

### Description

All attributes are numeric variables and they are listed bellow:

- Nombre - name of the companies
- Últ. - last price
- % Dif. - Difference between the last quote and the close of the previous session, expressed as a percentage
- Máx. - Maximum Price
- Mín. - Minimum Price
- Volumen - amount of the hiring of a certain degree in a period of time
- Efectivo (miles €) - Amount in euros. The traded cash of a transaction is the result of multiplying the number of shares traded by the price of each share (this is where the cash in euros is obtained; one of the measures used to measure the liquidity of a security)..Fecha - dangerous if greater than 1.3
- Hora - time the prices were checked

## Inspiration

The dataset was created from the data science course task. On the exchange's website, the pricing section was chosen to show how it could be scraped and how the dynamism of the table, which is updated every 15 minutes, works.

## License

The chosen license is the Public Domain License.

## Nivel 3

### - Exercises 3

**Choose a web page you want and do web scraping using the Scrapy library.**

For this task I chose the imdb site, also known as the Internet Movie Database. It is an online database of information about cinema, TV, music and games.

I scrape a list of best rated TV shows, their positions, links to detail and poster.

```

<p>
    The Top Rated TV Shows list only includes TV series and TV min
i series.
</p>
<ul>
<li>
        The list is ranked by a formula which includes the number of
ratings each show received from users, and value of ratings received from r
egular users
    </li>
<li>
        To be included on the list, a series or mini series must rece
ive ratings from at least 5000 users, and a TV series must also have aired
at least 5 episodes
    </li>
</ul>

```

The following pipeline stores all scraped items into a single items.json file, containing one item per line serialized in JSON format.

```
In [14]: # write items to a JSON file
import json

class JsonWriterPipeline(object):

    def open_spider(self, spider):
        self.file = open('imdb.json', 'w')
        self.file1 = open('imdb.json', 'w')

    def close_spider(self, spider):
        self.file.close()
        self.file1.close()

    def process_item(self, item, spider):
        line = json.dumps(dict(item)) + "\n"
        self.file.write(line)
        self.file1.write(line)
        return item
```

Next, the logger is created using the Spider's name (IMDB).

```
In [15]: # Logging from Spiders
import logging

class IMDB(scrapy.Spider):
    name = "imdb"
    start_urls = ['https://www.imdb.com/chart/toptv/?ref_=nv_tvv_250']
    custom_settings = {
        'LOG_LEVEL': logging.WARNING,
        'ITEM_PIPELINES': {'__main__.JsonWriterPipeline': 1}, # Used for p
        'FEED_FORMAT': 'json', # Used for p
        'FEED_URI': 'imdb.json' # Used for pipeline
    }

    def parse(self, response):
        for db in response.css('tbody.lister-list tr'):
            yield {
                'position': db.css('td.titleColumn::text').extract_first(),
                'name': db.css('td.titleColumn a::text').extract_first(),
                'year': db.css('td.titleColumn span.secondaryInfo::text').extract_first(),
                'artists': db.css('td.titleColumn a::attr(title)').extract_first(),
                'rating': db.css('td strong::text').extract_first(),
                'poster': db.css('td.posterColumn img::attr(src)').extract_first(),
                'movie_link': db.css('td.posterColumn a::attr(href)').extract_first()
            }
```

Scrapy is built on top of the Twisted asynchronous networking library, so, to start a Twisted reactor, configuring the logging and setting shutdown handlers, let's use CrawlerProcess.

```
In [16]: process = CrawlerProcess({
            'USER_AGENT': 'Mozilla/4.0 (compatible; MSIE 7.0; Windows NT 5.1)'
        })

        process.crawl(IMDB)
        process.start()
```

```
